DETAILED ACTION

- * The Applicants' pre-amendment has been made part of the record.
- * Pursuant to 35 USC 131, **Claims 1-29** are presented for examination.

Drawings

1. The Drawings are objected to because Figures 10-11, referred to as conventional in the specification, have not been labeled as prior art. Appropriate correction is required.

Claim Objections

- 1.1 Dependent claims recite apparatus while independent claims do not. Appropriate correction is required.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the **second** paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 1 is rejected under the **second paragraph of 35 U.S.C. 112**. It is unclear to the Examiner what decoder component limitation is being claimed.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-29 are rejected under 35 U.S.C. 102 (b) as being anticipated by **Ariyoshi et al.** *'Iterative Decoding Algorithms Updating Likelihood and Channel Values Based on Interim Hard Decision Results,'* IEEE, June 2000, (IDS of 2/2005).

- 3.1 As per **Claims 1-29**, **Ariyoshi et al.** discloses equivalent data communication processing comprising turbo code decoding, e.g., in Fig. 1 wherein decoding feature comprises a

redundant likelihood update unit, said likelihood update unit configured to receive encoded channel data along with channel-induced noise (Figs. 3-4) and to provide likelihood update for decoding said encoded channel data.

Fig. 2 depicts hardware components comprising equivalent soft output data and comparator means to implement the updating (LLR) function.

Ariyoshi et al. describes equivalent hardware/data flow implementation techniques used in decoding coded channel data, said hardware/data flow implementation techniques comprising logical components, such as adders, multipliers, comparators, modulators in Figs. 1-2.
